## SKILLS

|                |                                                    |
|----------------|----------------------------------------------------|
| Languages      | Java, TypeScript, JavaScript, Scala                |
| Backend        | Spring Boot, NestJS, Microservices, REST/SOAP APIs |
| Frontend       | Angular, React, HTML5, CSS3                        |
| Databases      | PostgreSQL, MySQL, DynamoDB, MongoDB, Redis        |
| Messaging      | Kafka, IBM MQ, Redis Pub/Sub                       |
| Cloud & DevOps | AWS, Docker, CI/CD, Jenkins                        |
| Tools          | OpenSearch, Elasticsearch, Git, Jira               |
| AI Tooling     | GitHub Copilot, Claude                             |

## EXPERIENCE

Software Developer II • Personify – MC Professional Platform • Toronto, ON Apr 2025 – Apr 2026

SaaS platform serving 2,500+ non-profit organizations across North America • Backend: Scala, Kafka, PostgreSQL, MongoDB

- Architected a distributed **invoice history logging system**, designing backend services and data models to track invoice lifecycle events across microservices
- Implemented **Kafka**-based event-driven pipeline to guarantee reliable invoice state propagation and eliminate cross-service inconsistencies
- Designed and executed database schema migrations and production data backfills as part of a **blue-green deployment**, coordinating Kafka consumer updates and data model changes for zero-downtime releases
- Resolved complex production incidents across microservices, **Kafka** consumers, and database layers, reducing mean time to resolution
- Built **Zapier** automation triggers that reduced billing-related incidents to zero
- Modernized **Angular** invoice UI to align with updated design standards

Full Stack Developer • Levio (formerly Indellient) • Toronto, ON Jun 2021 – Mar 2025

Viewbid — Online Auction Platform

- Built scalable **REST APIs** with **NestJS** and **PostgreSQL** powering high-frequency bidding for 21,000+ global users
- Developed full-stack auction features including auction management, user profiles, and bidding views using **Angular** on the frontend
- Enforced bid consistency under 21,000+ concurrent users using row-level locking and transactional writes in **PostgreSQL**
- Leveraged **Redis Pub/Sub** for asynchronous event propagation across services, enabling real-time bid updates at scale
- Implemented automated testing frameworks (**Jest**, **Cypress**) covering the bidding flow end-to-end
- Deployed and maintained containerized microservices on **AWS** using Docker and CI/CD pipelines

Fiserv — NOW Gateway, Real-Time Payments Platform

- Developed backend transaction processing pipeline for Fiserv's **NOW Gateway**, reducing payment settlement time from 1–3 days to seconds by implementing ISO format normalization, validation, and routing through The Clearing House **RTP network**
- Built services processing **100,000+ transactions monthly** across **5,000+ financial institutions** using **Java (Spring Boot)**, integrated **Kafka** and **IBM MQ** for asynchronous communication across financial microservices
- Implemented **idempotent transaction processing** using unique transaction reference IDs and pre-processing deduplication checks to prevent double settlement over at-least-once **IBM MQ** delivery
- Designed real-time monitoring dashboard tracking transaction throughput, success rates, and system failures across financial institutions
- Implemented SQL-driven test automation harness enabling support teams to simulate and validate real transaction scenarios with configurable parameters

## EDUCATION

BASc Computer Engineering • University of Ottawa •

2016 – 2020
